Elton Williams

DevOps Engineer | Python Developer | Senior Linux Systems Administrator | Infrastructure Engineer

PROFESSIONAL PROFILE

Experienced Linux Systems Administrator with over 15 years of expertise in Linux administration, enterprise infrastructure, automation, Python development, Docker, PostgreSQL, networking, cloud technologies and business-critical systems. Passionate about automation, reliability, infrastructure as code and delivering secure, scalable enterprise environments.

PROFESSIONAL EXPERIENCE

LDS Tech Leader | Senior Linux Systems Administrator

2018 - Present

RedPanda Software

- Manage enterprise Linux servers.
- Develop Python automation tools.
- Containerize applications using Docker.
- Administer PostgreSQL databases.
- Automate deployments and system monitoring.
- Support production environments.

DevOps Engineer | Desktop Support Technician

2013 - 2018

Melbro Group

- Progressed from Desktop Support Technician to DevOps Engineer, combining enterprise IT support with software development, automation, and Linux systems administration.
- Designed and developed internal applications using Python and Django, including web-based management portals, monitoring dashboards, and an in-house label printing solution to replace licensed third-party software.
- Developed automation and monitoring tools using Bash, Python, and Windows scripting to monitor store connectivity, automate reporting, improve remote management, and reduce manual operational tasks.
- Co-developed remote store management utilities supporting SSH and dial-up connectivity, enabling secure administration, configuration changes, data retrieval, and automated deployment across retail stores.
- Enhanced and maintained Django-based business applications and websites by improving functionality, user experience, Active Directory integration, and operational efficiency.
- Customized and remastered POS installation media, developed deployment utilities, and supported new communication projects to streamline store rollouts and operational processes.
- Provided second-line support for Linux servers, Windows desktops, retail POS systems, IP phones, multifunction devices, and enterprise infrastructure while supporting stores nationwide.
- Built strong expertise in Linux administration, Python development, Django, Bash scripting, systems automation, remote administration, networking, and enterprise IT operations.

Field Service Engineer

2008 - 2013

T-Systems South Africa (Old Mutual - Pinelands)

- Provided enterprise desktop engineering and field support within the Old Mutual environment, handling workstation deployments, hardware replacements, software installations, user moves, additions, and changes.
- Administered and supported IBM Tivoli Provisioning Manager (TPM) and Microsoft SCCM, including software packaging, deployment, agent installation, troubleshooting, and maintenance across large numbers of workstations.
- Performed remote workstation management, software rollouts, collection management, and deployment troubleshooting to ensure systems remained compliant and up to date.
- Installed, configured, and supported Windows desktop operating systems, Microsoft Office applications, Microsoft Exchange, VPN connectivity, printers, and other end-user technologies.
- Provided first and second-line technical support, responding to user incidents and service requests, diagnosing hardware and software issues, and ensuring timely resolution.
- Maintained and repaired desktop, laptop, and peripheral hardware while assisting with data backup, recovery, and migration activities.
- Created and maintained technical knowledge base documentation for common TPM deployment issues and resolutions, improving support efficiency across multiple teams.
- Worked closely with end-users and internal IT departments to identify problem areas, investigate solutions, and maintain a stable, reliable desktop computing environment.
- Gained extensive experience in enterprise desktop management, software deployment, systems administration, Microsoft technologies, and large-scale IT operations.

Field Service Engineer

2007 - 2008

T-Systems South Africa (Sanlam - Bellville)

- Provided desktop support for Microsoft Windows NT, 2000, and XP environments.
- Supported Microsoft Office, Microsoft Exchange, email, VPN, and line-of-business applications.
- Troubleshoot and resolved hardware and software issues for desktops, laptops, and printers.
- Installed, configured, and maintained operating systems, applications, and end-user devices.
- Performed data backup and recovery to ensure business continuity.
- Gained hands-on experience with enterprise server infrastructure and IT operations.

PROJECTS

Release Management Platform

Django application developed to automate QA/UAT/PROD release refreshes with PostgreSQL, Redis and Docker integration.

Test Environment Database Refresh Application

Django application developed to automate a previously manual process of 2 hours to 20 minutes greatly improving efficiency and reducing human error.

Branch Monitoring System

Python monitoring platform that collects, processes and reports branch health and infrastructure status.

Product Catalogue Management System

Developed a Django web application that replaced hardcoded product catalogue data with a dynamic, user-managed interface.

Operations Monitoring Dashboard

Built a Django web dashboard with Active Directory authentication for real-time store monitoring and operational management.
